

GREENCROP SEPARATION

Visscher Sepcom Green Bedding

Automatic press module

Visscher Sepcom Green Bedding features an automatic press module which adapts the counter-pressure to the medium's consistency. This allows the module to automatically apply the optimum pressing force.

PLC controller

The PLC controller can be adjusted to the dry matter content/mass balance desired for nutrients and dryness.

Cutting module

The filter and screw service lives depend on the quality of the slurry pumped to the separator. We offer you a combined stone trap and cutter solution for mounting on the pump pipe.

Pumps and agitators

The consistency and homogeneity of the slurry help ensure a good result. It is therefore important to choose the right agitation and pump in connection with slurry separation.

The product is ideal for the modern farmer who wishes to benefit as much as possible from a slurry separation solution.

- Fibre bedding that offers optimum comfort for cattle
- High dry matter content 26-37%
- Significant savings on labour resources
- Low power consumption
- Dryness control via simple dial adjustment
